

“Getting Better All the Time”

This old Beatles’ lyric serves as an apt description of a business destined for a brighter future. And continuing product improvement represents just one way Empire follows the tune.

Recent examples of our product improvements start with the **PF-6060-RS** shown top left. This piece of equipment benefits from the following modifications:

- New front-loading feature saves space and increases productivity in cell operations.
- Lower overall height (now under 14 feet) minimizes space requirements.
- More control on the rotary-blast-head targets blast zones with greater accuracy and boosts blast efficiency.
- Improved turntable profile facilitates loading and unloading of parts.
- Refined hopper design smooths media flow.

Improvements on our **IL-885** (top center) add the following benefits:

- Enlarged blast interior improves access for tasks such as nozzle adjustments.
- Longer entrance/exit hoppers reduce media drop off at the end of the conveyors.

- Movable slide gates enable adjustment of opening sizes on the “in” and “out” sides of the machine.
- Lower cone shape improves media pick up.

Our automated Cell Machine (top right) got better too.

- An internally mounted sliding door presents a cleaner exterior profile.
- An expanded work area within the enclosure improves access and processes larger parts.
- Finer incremental adjustment on stroke length enables more precise control.
