

SWECO® SHOT/GRIT CLASSIFIER

The SWECO Shot/Grit Classifier provides a high-speed, cost-effective means to remove sand, dust and tramp material from shot following metal finishing operations. Multiple screen decks in a wide range of mesh sizes also provide accurate reclassification of shot sizes to maintain maximum efficiency in metal cleaning, deburring and peening operations.

Key user advantages

- Classifies shot/grit for the manufacturer to meet his or S.A.E. specs.
- Reclaims shot/grit for user by removing tramp material.
- Accurate sizing.
- Efficient removal of extraneous materials.
- Compact dimensions.
- Energy-efficient operation.

31 years of engineering separates us from the rest.

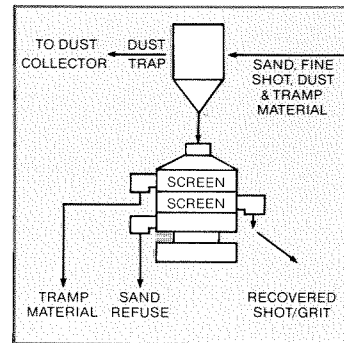

The SWECO Shot/Grit Classifier's rugged construction ensures long life and reduced maintenance costs under even the most demanding environmental conditions.

Of great importance also, SWECO offers

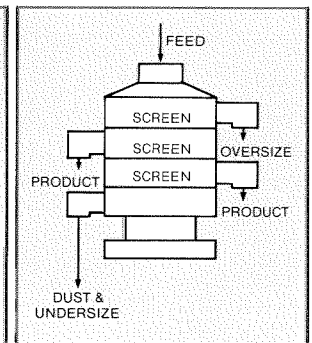

outstanding field service. For as long as you own a SWECO Shot/Grit Classifier, your local SWECO District Engineer is available for consultation, new applications, modifications and mechanical adjustment. And to

help keep your Classifier running trouble-free, a complete line of parts, motor repair and screening accessories are available.

This dedication to service plus pioneering in engineering innovation has enabled SWECO to achieve the preeminent position in circular vibratory screening. Today, more than 25,000 SWECO units are operating in over 500 different industries throughout the world.

Shot and/or Grit Recovery

Shot and/or Grit Classifying

Specifications of Standard Models

MODEL	SCREEN DIAMETER	MOTOR	HEIGHT (INCHES)	NET WEIGHT (POUNDS)	CAPACITY (LBS/HR)	
					SHOT	GRIT
LS18	18"	¼ hp	23¾, 2 deck	139	2,010	250
LS24	24"	⅓ hp	29¾, 2 deck	211	4,000	500
LS30	30"	½ hp	37, 2 deck	405	8,000	1,000
US48	48"	2½ hp	41¾, 2 deck	758	20,000	2,500
